

# New Boy

- **Excellent price/quality ratio:** we provide a basic version with many standard options at a favourable price. Of course, this version can be further personalised.
- The 'New Boy'-range is not only **compact**, but also surprisingly **silent**. This makes it for example very suitable for incorporation in vehicles.
- The renowned water-cooled '**Kubota**' engine makes sure you can work without concern for years, with minimal maintenance costs. The engine, which also complies with the most current emission norms, is utterly convenient for the heavy professional work.
- The **world-wide 'Kubota' service network** is at your disposal for spare parts as well as for warranty settlements.
- **Maintenance** never was this easy: the filters can be reached easily through the lockable doors, the oil drain pump makes the changing of oil a real piece of cake and also the filler caps on top of the generating set contribute to a fast and efficient maintenance.
- **Spare parts** can be delivered at short notice.
- Very **user-friendly** because of the presence of a central lifting eye, a mechanical fuel gauge and a control panel that is easy to operate.
- The 'New Boy'-range was developed in such a way that we can meet with almost every request of your customer. These are only a few **possibilities/options**:
  - Generating set in the **company colour** of the client
  - **Extra operating elements** at user's request
  - **Remote control** (wireless or with cable) makes you gain some time
  - **Automatic start/stop system** makes sure the genset takes over from the mains in case of electricity breakdowns
  - **Extra protections** to safeguard the user, engine and alternator
  - The generator can be mounted on a **trailer** with 4 bolts. This makes it very easy to transport the genset to any location
  - The **content of the tank** can be enlarged according to the client's wishes
